Undergraduate Research Evening

Biomedical Engineering Society

Oct 14 / 2026

Content

1 Introduction to Evening

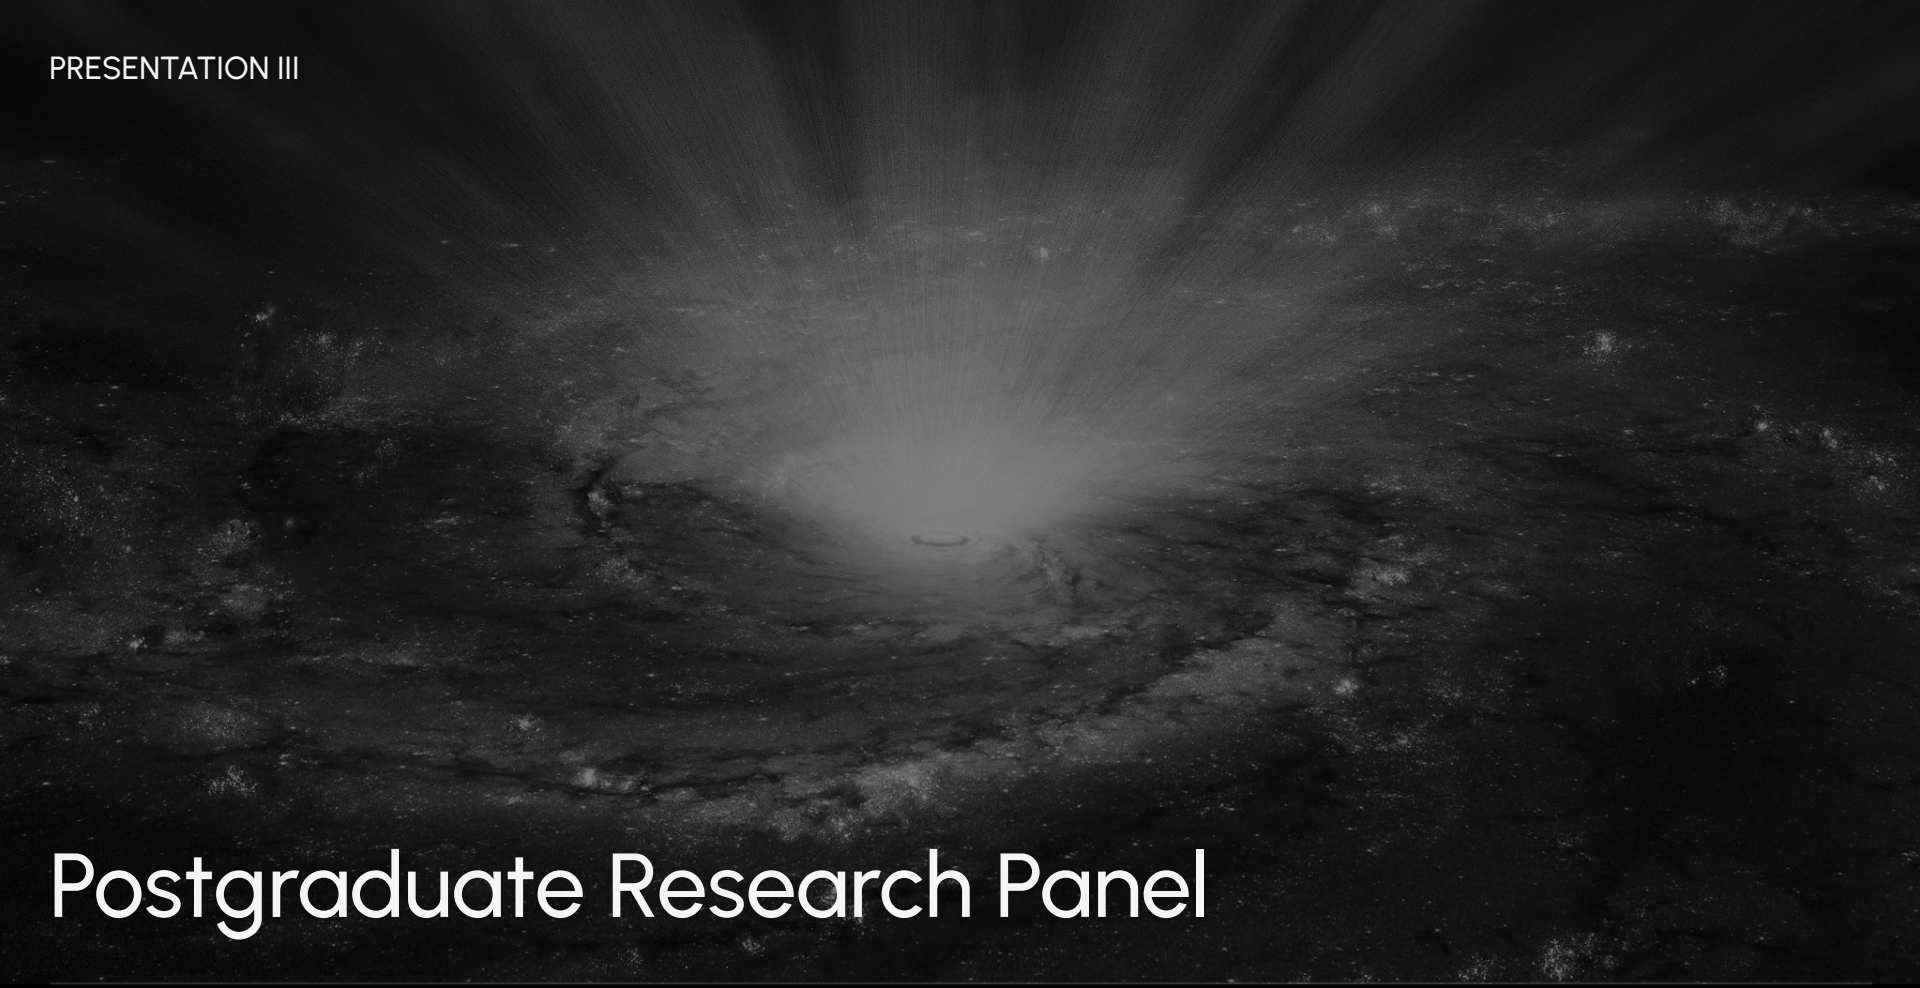

2 Design-A-Thon Lightning Talk I

3 Post-Graduate Researchers Panel

4 Undergraduate Research Panel

5 Meet & Greet for Design-A-Thon

PRESENTATION III

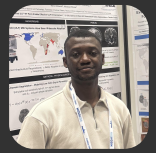

Postgraduate Research Panel

BMES

October 14th

2026

Toufiq Musah
PhD Student

Toufiq is a 1st year PhD student in the Electrical & Computer Engineering department, with a bachelors in Biomedical Engineering. His research interests are in medical and biological signal analysis, and artificial intelligence applications in medicine.

Christopher Lu
PhD Student

Christopher Lu is from Long Island, New York. He received his B.S. in Biomedical Engineering from the University of Rochester where he worked with Dr. James McGrath to develop a microfluidic sensor platform and Dr. Whasil Lee to computationally analyze osteoarthritic knee joint damage.

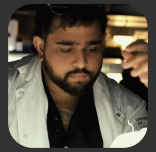

Amit Eshed
PhD Student

Amit is a 4th PhD candidate in Dr. Green's lab in the Biomedical Engineering Department. Through engineering RNA structures, he is developing point-of-care molecular diagnostic tests for the detection of a variety of highly infectious and challenging diseases.

Anagh Sinha
Master's Student

Anagh Sinha (double M.S. in Biology and Electrical and Computer Engineering) is regarded as a scholar with expertise at the intersection of biomedicine, engineering, and entrepreneurship. He has received major awards, prestigious fellowships, and international coverage.

Dev Bhatt
PhD Student

Dev Bhatt is a 4th year PhD student studying Biomedical Engineering in the El Microbial Integration group. His work centers around feedback control of protein-protein interactions for post translational control of microbes. This work will advance technology system control in deployable bioreactors.

Maria Lazou
PhD Student

Maria is a 5th year Ph.D. candidate in Biomedical Engineering at Boston University, where she also earned my B.S. in Biomedical Engineering. Her research focuses on improving antibody–antigen structure prediction and on using protein language models to optimize the expression of therapeutic antibodies.

Thank you

Ready for what's next?

Meet & Mingle with Other Design-A-Thon People, mentors and other competitors alike.

Feel free to ask me/Eboard questions!
